## Five Year Capital Request Project Descriptions

### (B) Science Research Center, Ph. I

Phase I of this project will construct a 110,000 NASF/189,000 GSF shared research facility to support the concept of an integrated university by providing state-of-the-art laboratories for CUNY’s top research faculty at one location. The new building will accommodate advanced research in the areas of nanoscience, photonics and environmental remote sensing and will be sited on the south campus of CCNY in close proximity to the new CCNY Science Building. The project cost includes routing of utilities from the campus's central plant to supply the new science buildings as well as the provision of new electrical service from Con Ed. It is anticipated that completion of this project may result in increases to operating and maintenance costs.

**Anticipated Completion:** January 2012

### (B) Science Research Center, Ph. II

The second phase of the CUNY Wide Advanced Science Research Center project will construct a 215,000 GSF addition to the Phase I building. Upon completion, the entire building will be approximately 404,000 GSF. Phase II will further support the concept of an integrated university by providing state-of-the-art laboratories for CUNY’s top research faculty at one location. This request is for initial funds to support design only; funds for construction will be requested in the next Five Year Capital Plan. It is anticipated that completion of this project may result in increases to operating and maintenance costs.

**Anticipated Completion:** TBD

---

### Note:

- **C.A.** = Condition Assessment
- **(B)** = Major Bonded Project
- **(R)** = Minor Rehabilitation Project
- **A** = Acquisition, **D** = Design, **C** = Construction, **E** = Equipment
